

At Beam Hela Osu Lanka, research-driven innovation and uncompromising quality form the core of our operations. Our dedicated QA and R&D teams combine deep expertise in Ayurvedic sciences with modern pharmaceutical research practices, ensuring every product meets the highest standards of safety, efficacy, and reliability.

We collaborate with leading academic and government institutions to validate our products through clinical trials and evidence-based research. During the COVID-19 pandemic, we launched Sudharsana Suspension in partnership with the University of Sri Jayewardenepura and University of Colombo, which successfully completed clinical validation. Alongside this, we introduced Swadharani in collaboration with government agencies for COVID management.

Ongoing research partnerships include the University of Colombo (clinical evaluation of Beam Fiel Cream), Uva Wellassa University (internship-driven product development), and Wayamba University (student internships on product innovation). Recent product innovations include capsule formulations for cardiovascular health and a herbal roll-on oil for headache relief, combining traditional Ayurvedic knowledge with modern therapeutic science.
